

Be IveyWise

Energy-Efficient, Better Built, Healthier Homes

IveyWise, developed exclusively by Ivey Homes, includes features and benefits that ensure your new home is on the cutting edge of efficiency, affordability, and convenience while employing the most progressive construction techniques.

How can I tell that an IveyWise home can save me money?

Look for the Ivey Energy Saving Label (ESL) posted at every IveyWise home and online. The ESL is unique to every IveyWise home and includes both a HERS rating and Average Annual Energy Savings for the home. A quality assurance test by an independent third party to rate each home's energy efficiency.

Why is an IveyWise home better than a code-built house?

An IveyWise home includes features and construction techniques that go over and above what the International Code Council prescribes in the International Building Code for new construction including advanced framing, 100% energy-saving light fixtures and bulbs, and programmable WIFI thermostats.

Why is an IveyWise home healthier?

IveyWise homes include low VOC (Volatile Organic Compound) paint, carpet, and hardwood floor glue. VOCs react with other elements to produce ozone, which causes air pollution and a host of health issues. Air barriers and air sealing isolate living areas from fumes, contaminants or allergens that might come through the attic or walls.
